This edited volume focuses on the use of 'necessary condition counterfactuals' in explaining two key events in twentieth century history, the origins of the First World War and the end of the Cold War. Containing essays by leading figures in the field, this book analyzes the causal logics of necessary and sufficient conditions, demonstrates the variety of different ways in which necessary condition counterfactuals are used to explain the causes of individual events, and identifies errors commonly made in applying this form of causal logic to individual events. It includes discussions of causal chains, contingency, critical junctures, and 'powder keg' explanations, and the role of necessary conditions in each. Explaining War and Peace will be of great interest to students of qualitative analysis, the First World War, the Cold War, international history and international relations theory in general. Edmund Burke, 18th-century Irishman and politician, was no 'C/conservative', yet 'Burkean conservatism' is seen as the core of modern C/conservatism. This volume shows how Burke's legacy was transformed over the course of the 19th century to create one of our most significant theories of modern politics and thought During the 1920s and 1930s thousands of European and American writers, professionals, scientists, artists, and intellectuals made a pilgrimage to experience the "Soviet experiment" for themselves. Showcasing the Great Experiment explores the reception of these intellectuals and fellow-travelers and their cross-cultural and trans-ideological encounters in order to analyze Soviet attitudes towards the West. Many of the twentieth century's greatest writers and thinkers, including Theodore Dreiser, Andr? Gide, Paul Robeson, and George Bernard Shaw, notoriously defended Stalin's USSR despite the unprecedented violence of its prewar decade. While many visitors were profoundly affected by their Soviet tours, so too was the Soviet system. The early experiences of building showcases and teaching outsiders to perceive the future-in-the-making constitute a neglected international part of the emergence of Stalinism at home. Michael David-Fox contends that each side critically examined the other, negotiating feelings of inferiority and superiority, admiration and enmity, emulation and rejection. By the time of the Great Purges, these tensions gave way to the dramatic triumph of xenophobia and isolationism; whereas in the twenties the new regime assumed it had much to learn from Western modernity, by the Stalinist thirties the Soviet order was declared superior in all respects. Drawing on the declassified archival records of the agencies charged with crafting the international image of

communism, David-Fox shows how Soviet efforts to sell the Bolshevik experiment abroad through cultural diplomacy shaped and were, in turn, shaped by the ongoing project of defining the Soviet Union from within. These interwar Soviet methods of mobilizing the intelligentsia for the international ideological contest, he argues, directly paved the way for the cultural Cold War. This book investigates the nature and relevance of conjunctive explanations in the context of science and religion. It explores questions concerning how scientific and religious explanations for features of the world or phenomena within it relate to each other and whether they might work together in mutually enriching ways. The chapters address topics including the relationship between Darwinian and teleological explanations, non-reductive explanations of mind and consciousness, and explanations of Christian faith and religious experience, while others explore theological and philosophical issues concerning the nature and feasibility of conjunctive explanations. Overall, the contributions help to provide conceptual clarity on how scientific and religious explanations might or might not work together conjunctively as well as exploring how these ideas relate to specific topics in science and religion more generally. Please note: This is a companion version & not the original book. Sample Book Insights: #1 Postmodernism is a movement that has swept through the intellectual world, and its leading lights are now familiar: Michel Foucault, Jacques Derrida, Jean-François Lyotard, and Richard Rorty. They have deconstructed reason, truth, and reality because they believe that in the name of reason, truth, and reality, Western civilization has wrought dominance, oppression, and destruction. #2 Postmodernism is a theory that states that the pain of the world is not experienced equally. The rich have their hands on the whip of power, and they use it to brutally mistreat the poor, women, and racial minorities. #3 Postmodernism is a philosophical and cultural movement that began in the 1960s. It is characterized by the rejection of traditional views of reality, language, and knowledge. It is inspired by the philosophies of Marxism and deconstruction. Cosmopolitan visions Terry A. Cooney traces the evolution of the Partisan Review-often considered to be the most influential little magazine ever published in America-during its formative years, giving a lucid and dispassionate view of the magazine and its luminaries who played a leading role in shaping the public discourse of American intellectuals. Included are Lionel Trilling, Philip Rahv, William Phillips, Dwight Macdonald, F. W. Dupee, Mary McCarthy, Sidney Hook, Harold Rosenberg, and Delmore Schwartz, among others. "An excellent book, which works at each level on which it operates. It succeeds as a straightforward narrative account of the Partisan Review in the 1930s and 1940s. The magazine's leading voices-William Phillips, Philip Rahv, Dwight MacDonald, Lionel Trilling, and all the rest-receive their due. . . . Among the themes that engage Cooney. . . are: how they dealt with 'modernism' in culture and radicalism in politics, each on its own and in combination; how Jewishness played a complex and fascinating role in many of the thinkers' lives; and, especially, how 'cosmopolitanism' best explains what the Partisan Review was all about."-Robert Booth Fowler, Journal of American History De beroemde Britse kosmoloog Stephen Hawking (1942-2018) over grote vragen zoals het bestaan van God, buitenaards leven, zwarte gaten, tijdreizen, artificiële intelligentie en de toekomst van de mensheid. The variety of experience available to medieval scholars and the vitality of medieval thought are both reflected in this collection of original essays by distinguished historians. Intellectual Life in the Middle Ages is presented to Margaret Gibson, whose own work has ranged from Boethius to Lanfranc and to the study of the Bible in the middle ages. This volume advances the claim that the FAO International Treaty on Plant Genetic Resources for Food and Agriculture (ITPGRFA) adopted in 2001 is the only existing international agreement with the potential to promote food security, conservation of biodiversity and equity. However, for germplasm-rich countries, national interests come into conflict with the global interest. This work shows that the pursuit of national interests is counterproductive when it comes to maintaining genetic resources, food-security and rent-seeking and that optimally, the coverage of the FAO Treaty should be widened to apply to all crops. Aguillard*, the United States Supreme Court declared as unconstitutional a Louisiana statute requiring the state's public schools to teach creationism if evolution is taught and to teach evolution if creationism is taught. It was a serious blow to creationism in public schools, but a new movement since then has kept the debate alive. That new movement is 'Intelligent Design.' Should Intelligent Design be taught in schools? In *Law, Darwinism, & Public Education*, Francis J. Beckwith asks whether teaching 'ID' in public schools would be constitutional, in light of the Supreme Court's decision in *Edwards v. Aguillard*. At that time, the Court ruled that teaching creationism violates the Establishment Clause of the First Amendment of the U.S. Constitution. Beckwith examines the Intelligent Design theory and the *Edwards* case to find out whether teaching ID would suffer the same fate if brought before the court. Landmark Cases in Property Law explores the development of basic principles of property law in leading cases. Each chapter considers a case on land, personal property or intangibles, discussing what that case contributes to the dominant themes of property jurisprudence - How are property rights acquired? What is the content of property rights? What are the limits or boundaries of property? How are property rights extinguished? Individually and collectively, the chapters identify a number of important themes for the doctrinal development of property institutions and their broader justification. These themes include: the obscure and incremental development of seemingly foundational principles, the role of instrumentalism in property reasoning, the influence of the law of tort on the scope of property doctrines, and the impact of Roman legal reasoning on the common law of property. One or more of these themes (and others) is revealed through careful case analysis in each chapter, and they are collected and critically explored in the editors' introductions. This makes for a coherent and provocative collection, and ensures that Landmark Cases in Property Law will be lively and essential reading for scholars, practitioners, and all those interested in the development of property principles at law. "It is an important quality of the intellectual mind that it remains open to doubt and is tolerant, even welcoming, of alternative views and explanations. This is a strength, not a weakness. Those who think only dogmatically and ideologically, on the other hand, entertain few if any doubts and regard themselves as being invariably right. This is a weakness, not a strength." \* In this new edition of 'Intellectuals, Creativity and Intolerance', the trials and tribulations of the intellectual in the modern age are analysed in detail. The challenge facing intellectuals as a class is where they stand and how to act in an increasingly opaque world, one in which a stand must be taken with regard to the political forces that lie in wait. By engaging with ideas ranging from ideological rifts and political responsibility to the vastness of the natural world and the inherent strangeness of the universe, 'Intellectuals' offers a more critical look at our milieu and reorients us towards a more critical future. This textbook covers the content of the BTEC National care course. It contains 12 units and advice and guidance on completion of the IVA. Tracing postmodernism from its roots in Jean-Jacques Rousseau and Immanuel Kant to their development in thinkers such as Michel Foucault and Richard Rorty, philosopher Stephen Hicks provides a provocative account of why postmodernism has been the most vigorous intellectual movement of the late 20th and early 21st centuries. Why do skeptical and relativistic arguments have such power in the contemporary intellectual world? Why do they have that power in the humanities but not in the sciences? Why has a significant portion of the political Left--the same Left that traditionally promoted reason, science, equality for all, and optimism--now switched to themes of anti-reason, anti-science, double standards, and cynicism? Explaining Postmodernism is intellectual history with a polemical twist, providing fresh insights into the debates underlying the furor over political correctness, multiculturalism, and the future of liberal democracy. This book discusses the TRIPs Agreement, the Madrid Protocol and other international conventions, and compares the basic principles of U.S. law with Asian & European law. [B]ecause of the thoroughness of the literature reviews and the comprehensive coverage of the chapter topics, [this book] should be required reading for any scholar working in related areas of personality or intelligence."--PsycCRITIQUES "This book is a masterly attempt to bring order and cohesion to a field that for many years has been riven with claims and counterclaims. The editors and authors are to be congratulated for addressing a very complex task so helpfully." John Biggs, PhD Honorary Professor of Psychology University of Hong Kong "If you are interested in intellectual stylesópeople's preferred ways of processing informationóthen this book belongs on your bookshelf." Richard E. Mayer, PhD Professor of Psychology University of California, Santa Barbara "For more than half a century, the construct of styleówhether designated as cognitive, thinking or learningóhas been in or out of fashion in the history of psychology and education. The editors of the present Handbook have invigorated the style construct in the form of intellectual styles, and have brought together a distinguished

international panel of chapter authors who offer up-to-date surveys of the assessment, development, correlates, and educational and organizational applications of intellectual styles. For those seeking to familiarize themselves with current theory and research in an intellectually exciting field, the present Handbook is essential." Nathan Kogan, PhD Professor Emeritus, Department of Psychology New School for Social Research, New York, NY The concept of intellectual styles has had a controversial history based on diverse philosophical and theoretical foundations. Most recently, the idea of intellectual stylesóan umbrella term that covers such closely related constructs as "cognitive styles," "learning styles," "teaching styles," and "thinking styles"óhas gained momentum as an explanation for why different people succeed in different professional and organizational settings. Previously, it was thought that high-achievers simply had more innate abilities than their less successful peers, but research has shown that individuals have different intellectual styles that are better suited for varying types of contexts and problems. Based on the most current and expansive research, this handbook is the first to provide a comprehensive review of research on the construct of intellectual style, from its foundations and development, to its relations to allied constructs, its roles in school and job performance, its applications in various populations, and its future.. This understanding of intellectual styles as a valid concept for both individuals and groups has far-reaching implications for researchers in cross-cultural psychology, multicultural education, organizational behavior and work performance, and many other academic disciplines, as well as practitioners in education and beyond. Key Features: Provides a comprehensive review of intellectual styles from multiple perspectives Written for students and scholars in diverse academic arenas, as well as practitioners in education and other fields Includes contributions from researchers from diverse disciplines, such as psychology, business, education, and health sciences When it comes to James Joyce's landmark work, *Ulysses*, the influence of three literary giants, Homer, Shakespeare, and Dante, cannot be overlooked. Examining Joyce in terms of Homeric narrative, Dantesque structure, and Shakespearean plot, Weir rediscovers Joyce's novel through the lens of his renowned predecessors. The reader's reaction might vary from confusion to excitement to enthusiasm or even resignation. F. Scott Fitzgerald said the novel made him feel a "hollow, cheerful pain" and remarked: "The book makes me feel appallingly naked." To Stephan Zweig *Ulysses* is not just a novel, to him it is a "witches Sabbath of the spirit, a gigantic 'Capriccio', a phenomenal cerebral Walpurgisnacht. ...] Something evil is its root." *Ulysses* is not a novel, it's an epic. Inspired by Homer's adventures of the voyager hero Odysseus Joyce expanded a short story to almost a thousand pages and created a one-of-a-kind portrait of Dublin, at the start of the twentieth century. Hence, *Ulysses* does not actually mirror the ancient epic, neither does it recall Irish history as presented in a history book, solely in terms of social and political events and changes....
