The Learning Healthcare System Aug 08 2021 As our nation enters a new era of medical science that offers the real prospect of personalized health care, we will be confronted by an increasingly complex array of health care options and decisions. The Learning Healthcare System considers how health care is structured to develop and to apply evidence-from health profession training and infrastructure development to advances in research methodology, patient engagement, payment schemes, and measurement-and highlights opportunities for the creation of a sustainable learning health care system that gets the right care to people when they need it and then captures the results for improvement. This book will be of primary interest to hospital and insurance industry administrators, health care providers, those who train and educate health workers, researchers, and policymakers. The Learning Healthcare System is the first in a series that will focus on issues important to improving the development and application of evidence in health care decision making. The Roundtable on Evidence-Based Medicine serves as a neutral venue for cooperative work among key stakeholders on several dimensions: to help transform the availability and use of the best evidence for the collaborative health care choices of each patient and provider; to drive the process of discovery as a natural outgrowth of patient care; and,

ultimately, to ensure innovation, quality, safety, and value in health care.

The Strategy Map for General Electric Medical Systems, 2002 Oct 22 2022 Research Paper (undergraduate) from the year 2008 in the subject Business economics - Business Management, Corporate Governance, grade: 1,3, University of Applied Sciences Berlin (Master of Business Administration), course: Strategic Management, language: English, abstract: If you take the words of a former General Electrics (GE) employee to define strategy, William E. Rothschild said, "What do you want to achieve or avoid? The answers to this question are objectives. How will you go about achieving your desired results? The answer to this you can call strategy." This statement not only highlights the need

for strategy but also the need to bring strategy to fruition. Companies should not only devise strategy but also successfully clarify and execute their strategies. This means that a company has to be able to measure its strategic success. Unfortunately, company strategy is not always transparent or understood in the same way by a company's key players. Sun Tzu, a Chinese military strategist who wrote the military treatise *The Art of War*, praised this aspect for strategies in war as follows: "All men can see these tactics whereby I conquer, but what none can see is the strategy out of which victory is evolved". The Strategy Map created by Kaplan and Norton is to facilitate corporate strategy development and execution providing a missing link between strategy formulation and strategy implementation by identifying the key internal processes that drive strategic success and by aligning investment in people, technology and organizational capital for the greatest impact. The first part of the assignment describes in detail the theoretical framework of Strategy Maps. The second part uses the theory to describe and visualize the Strategy Map of General Electric Medical Systems (GEMS) - the world's leading manufacturer of diagnostic imaging equipment. This practical approach is based on the publication of Tarun Khanna about GEMS in the Harvard Business School Press in

Biomedical Engineering Design Oct 30 2020 Biomedical

Engineering Design presents the design processes and practices used in academic and industry medical device design projects. The first two chapters are an overview of the design process, project management and working on technical teams. Further chapters follow the general order of a design sequence in biomedical engineering, from problem identification to validation and verification testing. The first seven chapters, or parts of them, can be used for first-year and sophomore design classes. The next six chapters are primarily for upper-level students and include in-depth discussions of detailed design, testing, standards, regulatory requirements and ethics. The last two chapters summarize the various activities that industry engineers might be involved in to commercialize a medical device. Covers subject matter rarely addressed in other BME design texts, such as packaging design, testing in living systems and sterilization methods Provides instructive examples of how technical, marketing, regulatory, legal, and ethical requirements inform the design process Includes numerous examples from both industry and academic design projects that highlight different ways to navigate the stages of design as well as document and communicate design decisions Provides comprehensive coverage of the design process, including methods for identifying unmet needs, applying Design for 'X', and incorporating standards and design controls Discusses topics that prepare students for careers in medical device design or other related medical fields

GE in India Jan 25 2023 It was the morning of December 2014, Munesh Makhija reflected on the existing strategy

of General Electric (GE) for Bottom of Pyramid (BoP) markets. Makhija had taken over as Managing Director, GE India Technology Center and Chief Technology Officer (CTO) - GE South Asia, in early 2014. Earlier, he served as the CTO for GE Healthcare India from 2010 to 2012 and had spent a little over 12 years, much of it in the US, in its healthcare business. In the past few years, he had the opportunity to get a first-hand feel of the BoP market. He could see how healthcare sector, particularly medical devices market was undergoing a rapid transformation. The impact of 'Reverse Innovation' which was the outcome of the strategy adopted by GE to promote frugal innovations with a focus on BoP markets in India and other like markets fascinated him. GE had successfully launched 25 super value products (Exhibit 1) primarily for the BoP market in the last five years and had received a favorable response for all of them. However, frugal innovation in India was becoming more common in the healthcare space ranging from low-cost surgeries to low-cost medical devices and competition was building up.

Healthcare at a Crossroad: Seismic Shifts, New Business Models for Success

Healthcare Disrupted is an in-depth look at the disruptive forces driving change in the the healthcare industry and provides guide for defining new operating and business models in response to these profound changes. Based on original research conducted by Accenture and years of experience working with the most successful companies in the industry, healthcare experts Jeff Elton and Anne O’Riordan provide an informed, insightful view of the state of the industry, what's to come, and new emerging business models for life sciences companies play a different role from the past in to driving superior outcomes for patients and playing a bigger role in creating greater value for healthcare overall. Their book explains how critical global healthcare trends are challenging legacy strategies and business models, and examines why historical leaders in the industry must evolve, to stay relevant and compete with new entrants. Healthcare Disrupted captures this pivotal point in time to give executives and senior managers across pharmaceutical,

biopharmaceutical, medical device, medical diagnostics, digital technology, and health services companies an opportunity to step back and consider the changing landscape. This book gives companies options for how to adapt and stay relevant and outlines four new business models that can drive sustainable growth and performance. It demonstrates how real-world data (from Electronic Medical Records, health wearables, Internet of Things, digital media, social media, and other sources) is combining with scalable technologies and advanced analytics to fundamentally change how and where healthcare is delivered, bridging to the health of populations, and broadening the responsibility for both. It reveals how this shift in healthcare delivery will significantly improve patient outcomes and the value health systems realize.

Molybdenum-99 for Medical Imaging Apr 23 2020 The decay product of the medical isotope molybdenum-99 (Mo-99), technetium-99m (Tc-99m), and associated medical isotopes iodine-131 (I-131) and xenon-133 (Xe-133) are used worldwide for medical diagnostic imaging or therapy. The United States consumes about half of the world's supply of Mo-99, but there has been no domestic (i.e., U.S.-based) production of this isotope since the late 1980s. The United States imports Mo-99 for domestic use from Australia, Canada, Europe, and South Africa. Mo-99 and Tc-99m cannot be stockpiled for use because of their short half-lives. Consequently, they must be routinely produced and delivered to medical imaging centers. Almost all Mo-99 for medical use is produced by irradiating highly enriched uranium (HEU) targets in research reactors, several of which are over 50 years old and are approaching the end of their operating lives. Unanticipated and extended shutdowns of some of these old reactors have resulted in severe Mo-99 supply shortages in the United States and other countries.

Some of these shortages have disrupted the delivery of medical care. Molybdenum-99 for Medical Imaging examines the production and utilization of Mo-99 and associated medical isotopes, and provides recommendations for medical use.

Crossing the Quality Chasm Feb 02 2021 Second in a series of publications from the Institute of Medicine's Quality of Health Care in America project Today's health care providers have more research findings and more technology available to them than ever before. Yet recent reports have raised serious doubts about the quality of health care in America. Crossing the Quality Chasm makes an urgent call for fundamental change to close the quality gap. This book recommends a sweeping redesign of the American health care system and provides overarching principles for specific direction for policymakers, health care leaders, clinicians, regulators, purchasers, and others. In this comprehensive volume the committee offers: A set of performance expectations for the 21st century health care system. A set of 10 new rules to guide patient-clinician relationships. A suggested organizing framework to better align the incentives inherent in payment and accountability with improvements in quality. Key steps to promote evidence-based practice and strengthen clinical information systems. Analyzing health care organizations as complex systems, Crossing the Quality Chasm also documents the causes of the quality gap, identifies current practices that impede quality care, and explores how systems approaches can be used to implement change.

A Journey towards Patient-Centered Healthcare Quality

Nov 30 2020 This book provides valuable insight into emerging trends in healthcare delivery; patient, family and caregiver engagement and the intersection of the two. It is unique in that it not only incorporates patient's voice but provides context in the application of patients' families and caregivers in healthcare transformation and the future of healthcare models. It provides valuable information on quality improvement, consumer experience and emerging careers in this area with practical information and interventions. Nurses and other members of the care team play a critical role in the evolving models of care and must stay abreast of emerging trend to ensure that patients' needs are met while contributing to meeting the quality and economic goals of the organizations and care settings in which they work. This book will help to ensure that they remain abreast of changing trends in quality improvement, quality measurement, cost, health information technology and patient and family engagement so that they are in a position to lead their teams and organizations. Direct accounts from patients, family and caregivers who want their "voices" heard are incorporated throughout the book.

Next, it delves into the range of safety issues that nurses must contend with. Topics covered include administrative area safety, bloodborne pathogens, workplace violence, infection control and prevention, emergency management, fire safety, and radiation hazards. Examining the concepts and principles of patient safety as related to organizational dynamics, culture, system methods, and key patient safety initiatives, the book supplies essential knowledge of healthcare safety risks, challenges, and controls. It includes information on leadership, management, communication skills, and understanding accidents. The book includes helpful resources in the appendices, such as a nurse safety perception survey, an accident causal factor chart, sample ergonomics symptoms report, sample TB exposure control plan, and a model respirator plan for small organizations. Complete with review exercises in each chapter, this book is ideal for certification training in nursing programs and as a reference for developing nursing in-service safety sessions.

Building a National Capability to Monitor and Assess Medical Countermeasure Use During a Public Health Emergency

Jun 25 2020 During public health emergencies (PHEs) involving chemical, biological, radiological, or nuclear threats or emerging infectious diseases, medical countermeasures (MCMs) (e.g., drugs, vaccines, devices) may need to be dispensed or administered to affected populations to help mitigate the human health impact of the threat. The optimal MCMs determined for use during an emergency might be U.S. Food and Drug Administration (FDA) approved but used in unapproved ways (e.g., in a new age group or against a new agent); FDA approved using animal models because human efficacy testing is not ethical or feasible; or not yet FDA approved for any indication. As part of the United States' scientific and research preparedness enterprise, there is an imperative to go "beyond the last mile" of MCM dispensing and administration to build and maintain a national capability to monitor and assess the use of MCMs (e.g., safety, compliance, clinical benefit) after they have been dispensed during PHEs. To further the discussion on this need, the Board on Health Sciences Policy of the National Academies of Sciences, Engineering, and Medicine hosted a 2-day public workshop, Building a National Capability to Monitor and Assess Medical Countermeasure Use in Response to Public Health Emergencies. The workshop, sponsored by FDA, was held on June 6–7, 2017, in Washington, DC. Workshop participants discussed the roles and efforts of the federal government and of relevant stakeholders with an interest in building and maintaining a national PHE MCM active monitoring and assessment capability. This publication summarizes the presentations and discussions from the workshop.
