As a child, my fondest memories were exploring in forests, playing in creek beds, finding groves of mushrooms, digging in the dirt, and building houses in trees. Our connections and interactions with nature as we grow, evolve and shape our bodies, personality,

interests, and passions in life. Scientific research now shows how nature positively impacts our biology, mental health, learning and connections to the world and people around us. Research also shows a decline in children's health, learning, sense of self and creativity, that is correlated with the excessive use of technology, and reduced time spent outdoors playing. Now more than ever, we must believe in the importance of sharing the gifts of nature, and the love of nature with the world - so they will care for what is most important - the earth we live on, the nature of our planet, and our health and wellbeing. This book has been written to give teachers and parents, a solid foundation in the reasoning for nature connection, and a toolkit full of ideas, and tactics that will make nature connection with children, stimulating, educationally rewarding, and life-enriching for both the adult and the child. The book condenses the scientific research on technology, nature, and how they impact childhood development and learning. In a busy modern world that is ever changing, it is important that parents and teachers are up to date and armed with the most relevant knowledge, to deal with the culture, the world that we are in, the current challenges we face in science, education, and in the roles of parents, mentors and teachers. It is an easy to read, practical guide, that can help shape the way things are done in and out of the classroom, to stimulate the creation of solid foundations for our children's connection to nature to flourish.

Made in the USA. Nature is full of fascinating stories, stories that attract our attention at a young age and keep us amazed throughout our entire lives. The need to understand nature draws us back to its simple beauty again and again, yet underneath this simplicity lies a complex web of associations and patterns. The Nature Handbook does what no other field guide does: explores and explains nature through these connecting patterns, revealing them to the many different types of nature lovers. All naturalists--from birders to gardeners, hikers to environmentalists, wildflower enthusiasts to butterflyers-- will appreciate the different approach of the Handbook, even those whose interest in the natural world is just beginning to develop. Naturalists who are already well versed in one group of organisms--birders, for example--will find new explanations and patterns for their favorite group, as well as new patterns all around them that they had previously overlooked. Observations in the Handbook are arranged in the three main sections of plants, animals, and habitats. These sections are then connected through discussions of the relationship of size and shape, adaptations, distribution patterns, behavior, and diversity of life. Since the emphasis is on patterns rather than individual species, each chapter has cross-references to related topics. For example, tree-related topics such as leaf shape, treelines, and fall colors, are all discussed in different chapters even though they are related. Leaf shape is associated

with trees as organisms, and therefore is in Chapter 2: Trees; treelines are most associated with mountains, so their description is in Chapter 8: Mountains; fall colors apply more broadly to forests than to individual trees, and they are discussed in Chapter 9, Forests. Approximately 500 color photographs help make the more than 200 patterns apparent and recognizable for readers, and each pattern is accompanied by a detailed description and a brief list of sources. The book is designed to invite browsing, and readers will gain a rich ecological perspective and insight. Curiosity about the world around us is a basis for human learning; The Nature Handbook serves to aid all nature lovers in their quest for understanding the many stories that our living world provides.
