Valuing Health Care Feb 24 2023

Valuing Freedoms Mar 01 2021 Drawing on the work of John Finnis and others, Alkire addresses foundational issues regarding the identification and pursuit of 'valuable' dimensions of human development based in practical reason, then observes that much of the criticism and development arises from negative impacts on social or cultural/religious dimensions that are also deeply valued by the poor.

OECD Health Policy Studies Achieving Better Value for Money in Health Care Nov 09 2021 This report report examines selected policies that may help countries better achieve the goal of improved health system efficiency and thus better value for money.

Value Based Cost Sharing Meets the Theory of Moral Hazard Jan 19 2020 The conventional theory of optimal coinsurance rates in health insurance in the presence of moral hazard indicates that, in situations of equal risk characteristics, coinsurance should vary if the price-responsiveness or price-elasticity of demand for different

medical services varies, and should be larger for the more price responsive services. An alternative theory called "value-based cost sharing" indicates that coinsurance should be lower for services with higher (marginal) benefits relative to costs. This paper reconciles the two views. It shows that, if patient demands are based on correct information on benefits and costs, the conclusion of the conventional view is identical to the conclusion from the value-based approach. If patient demands differ from correct demands, it is shown that optimal coinsurance depends both on the extent and direction of information imperfection and on price-responsiveness or price elasticity. The paper also shows, as an alternative to adjusting coinsurance to deal with information imperfection, that providing better information which affects patient demands can be superior if uninformed patient demands exceed informed patient demands, but value based cost sharing can be superior to providing information (even if the cost of information is minimal) when patient demands fall short of informed demands. An extended numerical example illustrates these points.

Valuing Good Health in Milwaukee Feb 12 2022

Valuing Health Sep 19 2022 In Valuing Health Daniel M. Hausman provides a philosophically sophisticated overview of generic health measurement that suggests improvements in standard methods and proposes a radical alternative. He shows how to avoid relying on surveys and instead evaluate health states directly. Hausman goes on to tackle the deep problems of evaluation, offering an account of fundamental evaluation that does not presuppose the assignment of values to the properties and consequences of alternatives. After discussing the purposes of generic health measurement, Hausman defends a naturalistic concept of health and its relations to measures such as quality-adjusted life-years (QALYs) and disability-adjusted life years (DALYs). In examining current health-measurement systems, Valuing Health clarifies their value commitments and the objections to relying on preference surveys to assign values to health states. Relying on an interpretation of liberal political philosophy, Hausman argues that the public value of health states should be understood in terms of the activity limits and suffering that health states impose. Hausman also addresses the moral conundrums that arise when policy-makers attempt to employ the values of health states to estimate the health benefits of alternative policies and to adopt the most cost-effective. He concludes with a general discussion of the difficulties of combining consequentialist and non-consequentialist moral considerations in policy-making.

Durf te leiden Apr 21 2020 Brené Brown heeft de afgelopen twintig jaar onderzoek gedaan naar de emoties en ervaringen die betekenis geven aan ons leven, en werkte de afgelopen zeven jaar nauw samen met leiders en cultuurveranderaars over de hele wereld. Ze ontdekte dat allerlei bedrijfstakken, van kleine start-ups tot Fortune 50-bedrijven, met dezelfde vraag worstelen: "Hoe ontwikkelen we moediger leiders en hoe verankeren we moed en durf in onze bedrijfscultuur?" In dit nieuwe boek combineert Brené haar onderzoeksresultaten met persoonlijke verhalen en voorbeelden om deze vraag te beantwoorden. Durf te leiden gaat over echt

leiderschap: vanuit het hart en vol moed.

**Economic Valuation of Environmental Health Risks to Children Apr 14 2022** The relationship between environment and children's health has been the subject of increasing interest these last ten years. For instance, many OECD Member countries are reporting asthma epidemics exacerbated by air pollution: in the United States nearly 1 in 13 school-age children (approximately 4.8 million) has asthma, and the rate is increasing more rapidly in school-age children than in any other group. The importance of this issue has resulted in a growing number of epidemiological studies aiming at better understanding and better characterising the relationship between environmental pollution and the health of children. However, in many respects, the valuation of children's health strongly differs from the valuation of adults' health and constitutes a real challenge for analysts as well as for decision-makers. Consequently, this book proposes an in depth analysis of the main methodological difficulties associated with estimating the social value of a reduction in risk to children. Questions such as how to elicit children's preferences, what valuation methodology and benefit measure to choose, how to discount benefits to children's health, and how to account for economic uncertainties in this specific context of economic valuation will be systematically examined in order to define key policy implications and to pave the way for further research.

**Valuation of Benefits of Health and Safety Control Dec 10 2021**

**Economic Evaluation Aug 18 2022** There are so many ways in which health might be improved today and, as technology improves, the opportunities will increase. However, there are limits to budgets as well as other resources so choices have to be made about what to spend money and time on. Economic evaluation can help set out the value of the costs and benefits from competing choices. This book examines how to undertake economic evaluation of health care interventions in low, middle and high income countries. It covers: Ways in which economic evaluations might be structured Approaches to measuring and valuing costs and effects Interpreting and presenting evidence Appraising the quality and usefulness of economic evaluations

**Valuing Environmental, Health and Social Benefits Using Choice Modeling Jan 11 2022**

**Measuring Public Value Jul 05 2021** In-Vitro-Fertilisation is a major technological breakthrough which makes it possible to have babies in the case of infertility. It is also rather expensive and challenging from an ethical perspective. The starting point of this book is: Should IVF be publicly funded in Italy? To answer this pragmatic question the research presented in the book makes use of the best methods in the field of economic evaluation of healthcare programs and provides an example of scientific rigor applied to a relevant social policy issue.

**Valuing Health Care Jan 23 2023** This book is about the cost effectiveness of present and future medical technologies. Methods of analyzing cost effectiveness are described in terms of choices that take into consideration dollar values of treatment, quality of life and the rationale for deciding who should receive treatment in situations of rationed

care. Essays in the book range from lay level to technical state of the art, making the book of interest to a wide variety of readers.

Health Insurance Oct 16 2019

Oregon Public Employees' Benefit Board Postemployment Health Benefits Nov 16 2019

Health, what is it Worth? Nov 21 2022 This book is a collection of papers that tackles concerns in health care services and health benefit systems. The title first deals with the measure of health status, along with the policy that governs it and the results of contemporary biomedical research. The text also covers the approaches for the assessment of long-term care. The next part talks about valuing health and health benefits. Next, the selection deals with a method for the computation of the social rate of returns derived from investments in biomedical research. The last part discusses the concerns in health resource allocation.

Valuation Methods and Policy Making in Environmental Economics Apr 02 2021 Hardbound. This volume considers, in depth, some valuation methods and aspects of cost benefit analysis, and policy making in environmental economics. Part I contains a number of contingent valuation studies for non-market assets. Part II consists of contributions on the valuation of health and life, and deals with the benefits of reduced morbidity from air pollution control. In Part III, cost benefit analysis for environmental policy-making is discussed in a disequilibrium setting, and in a macroeconomic context. Finally, Part IV deals with aspects of policy-making, particularly benefit estimation for complex policies, and the international aspects of transboundary air pollution in Europe. The book should not only appeal to students and researchers in university departments of economics and environmental sciences" but also to those working in public organisations and associated advisory institutes which are concerned with environmental problems.

Defining the Value of Medical Interventions May 03 2021 Defining the value in health care and elaborating appropriate value-propositions for health care beneficiaries poses numerous empirical and normative challenges. Different methods of Health Technology Assessments (HTAs) embedded in various interdisciplinary approaches of defining the value of health care have been established in recent years. Current initiatives aim to develop and combine transnational attempts to define an overall acceptable range for value-based healthcare interventions. In this book international scholars with background in medicine, philosophy, health-economics and further disciplines, who participated in an interdisciplinary conference in 2019 combine in-depth analyses with reflections informed by multidisciplinary debates on a pressing issue in healthcare.

Measuring and Valuing Health Benefits for Economic Evaluation Oct 20 2022 With limited resources and funding, it is impossible to invest in all potentially beneficial health care interventions. Choices have to be made, and this guide allows the reader to measure and value the benefits of interventions, a key component of economic evaluation, which permits comparisons between interventions.

The Economy as a Process of Valuation Sep 26 2020 This text looks at the potential

benefits of concept and theory formation along dynamic, evolutionary and valuation for understanding economic processes.

**The Contingent Valuation Method in Health Care Aug 06 2021** The Contingent Valuation Method in Health Care is offered as a contribution to improving instruments of political decision making in health care. At a fundamental level, it is about methodological aspects of the contingent valuation method. It gives a holistic view of applying the contingent valuation method for use in policy. It shows all stages of a contingent valuation study beginning with the design, the choice of elicitation techniques and estimation methods for willingness-to-pay, the use of the results in a cost-benefit analysis, and finally, the policy implications resulting from our findings. The intended audience of The Contingent Valuation Method in Health Care are health economists interested in methodological problems of contingent valuation studies, people involved in health care decision making, planning, and priority setting as well as people interested in Alzheimer's Disease.

**Cost-Benefit Analysis May 23 2020** A comprehensive and authoritative introduction to cost-benefit analysis that aims to be readable and user-friendly.

**Building a High-Value Health System Mar 13 2022** Introduction to the health of a population -- Assessing the health system of a country -- How did we get here? : historical megatrends in health and medical care -- Developing a vision and goals -- Developing plans for change : a framework for designing a high-value health system -- Testing the change, improving the plan -- Insights from systems thinking -- Implementing a change : adoption and diffusion -- So what, who cares? : the wrap-up.

**Learning and the Value of Information Oct 08 2021** We estimate a Bayesian learning model in order to assess the value of health plan performance information and the extent to which the explicit provision of information about product quality alters consumer behavior. We take advantage of a natural experiment in which health plan performance information for HMOs was released to employees of a Fortune 50 company for the first time. Our empirical work indicates that the release of information had a small but statistically significant effect on health plan choices, causing 3.1% of employees to switch health plans. Although consumers were willing to pay an extra \$267 per year per below average rating avoided, the average value of the information per employee was only \$10 per year. The relatively small impact of the ratings arises because the ratings were estimated to be very imprecise measures of quality. More precise measures of quality could have been more valuable.

**Valuing the Benefits of Health and Safety Regulation May 15 2022**

**Cost-benefit and Cost-effectiveness Analysis in Health Care Dec 18 2019** Bibliografi, usa. The substance and structure of the text follow the book's title: Principles, practice and potential. Chapter 1 provides background on the nature, magnitude, and causes of the health care cost problem, concluding with a discussion of the cost containment ideas and activities. Chapter 2 introduces the reader to cba-cea, discussing the chapter closes with some recent developments indicating the current intensity of interest in cba-cea in both health professional and policy circles. Chapter 3, on

principles, presents the methodology of cba-cea. Chapter 4, on practice, examines the health care cba-cea literature by presenting our empirical analysis of trends in the growth and character of the literature, identifying substantive topics of interest. Chapter 5, on potential, evaluates the health policy uses and future usefulness of cba-cea.

Nutritional Value and Health Benefits from Fruits, Vegetables, Nuts and Spices Dec 30 2020

Valuing Health Care Jul 17 2022 As expenditure on health care has increasingly become an area of public debate and concern, public and private health care decision-makers have called for more rigorous use of cost-benefit and cost-effectiveness analysis to guide spending. Concerns have arisen, however, about the overall quality of such analyses. This book discusses and evaluates best-practice methods of conducting cost-benefit and cost-effectiveness studies of pharmaceuticals and other medical technologies. It encompasses a wide variety of topics, ranging from measuring cost and effectiveness to discounting to the use of dynamic modelling of cost-effectiveness. The book also includes conceptual and practical aspects of cost-effectiveness analysis by researchers who have conducted applied research in these areas. Rarely does the book provide a singular solution to a measurement problem; rather, the reader is directed to choices among alternative approaches and an analysis of the advantages and disadvantages of each.

Healthcare Valuation: The four pillars of healthcare value Jun 04 2021

Functional Foods and Dietary Supplements Nov 28 2020 Functional foods are foods which contain bioactive components, either from plant or animal sources, which can have health benefits for the consumer over and above their nutritional value. Foods which have antioxidant or cancer-combating components are in high demand from health conscious consumers: much has been made of the health-giving qualities of fruits and vegetables in particular. Conversely, foods which have been processed are suffering an image crisis, with many consumers indiscriminately assuming that any kind of processing robs food of its "natural goodness". To date, there has been little examination of the actual effects - whether positive or negative - of various types of food processing upon functional foods. This book highlights the effects of food processing on the active ingredients of a wide range of functional food materials, with a particular focus on foods of Asian origin. Asian foods, particularly herbs, are becoming increasingly accepted and demanded globally, with many Western consumers starting to recognize and seek out their health-giving properties. This book focuses on the extraction of ingredients which from materials which in the West are seen as "alternative" - such as flour from soybeans instead of wheat, or bran and starch from rice - but which have long histories in Asian cultures. It also highlights the incorporation of those bioactive compounds in foods and the enhancement of their bioavailability. Functional Foods and Dietary Supplements: Processing Effects and Health Benefits will be required reading for those working in companies, research institutions and universities that are active in the areas of food processing and agri-food environment.

Food scientists and engineers will value the new data and research findings contained in the book, while environmentalists, food regulatory agencies and other food industry personnel involved in functional food production or development will find it a very useful source of information.

Valuing Health for Regulatory Cost-Effectiveness Analysis Dec 22 2022 Promoting human health and safety by reducing exposures to risks and harms through regulatory interventions is among the most important responsibilities of the government. Such efforts encompass a wide array of activities in many different contexts: improving air and water quality; safeguarding the food supply; reducing the risk of injury on the job, in transportation, and from consumer products; and minimizing exposure to toxic chemicals. Estimating the magnitude of the expected health and longevity benefits and reductions in mortality, morbidity, and injury risks helps policy makers decide whether particular interventions merit the expected costs associated with achieving these benefits and inform their choices among alternative strategies. Valuing Health for Regulatory Cost-Effectiveness Analysis provides useful recommendations for how to measure health-related quality of- life impacts for diverse public health, safety, and environmental regulations. Public decision makers, regulatory analysts, scholars, and students in the field will find this an essential review text. It will become a standard reference for all government agencies and those consultants and contractors who support the work of regulatory programs.

Healthcare Economics Made Easy, second edition Jan 31 2021 Highly Commended in the BMA Medical Book Awards 2018! Here's what the judges said: "This is one of the few textbooks I would suggest every clinician reads." Healthcare Economics Made Easy 2e is a clear and concise text written for healthcare professionals and students who need to understand the basics of the subject but who do not want to wade through a specialist health economics text. This new edition builds on the success of the first edition by adding new chapters which provide a comparison across several western economies, as well as a consideration of the US healthcare system. Healthcare Economics Made Easy 2e will equip the reader with the necessary skills to make valid decisions based on the economic data and with the background knowledge to understand the health economics literature. This book provides insight into the economic methods that are used to promote public health policies, the techniques used for grading and valuing evidence and the statistics relied upon, without trying to re-train the reader as a health economist. If you are left bemused by terms such as QALY, health utility analysis and cost minimisation analysis, then this is the book for you! From reviews of the first edition: "This is a clearly written and accessible introduction to health economics... This book should prove useful to all those responsible for planning and delivering health service. It is a quick read but also a useful reference for the desk.... I would commend this book as a means by which people .... can better understand both the impact of their own practice on our health economy and also appreciate the methods that are being adopted to determine clinical practice at a regional and super-regional level." Ulster Medical Journal, 2014

De zeven eigenschappen voor succes in je leven Jun 23 2020 De 7 eigenschappen is al 25 jaar een klassieker. Het is het perfecte boek voor mensen die meer sturing aan hun leven willen geven. De zeven eigenschappen vormen een complete aanpak om te leven naar de principes die voor jou belangrijk zijn of je nu betere keuzes wilt maken, jezelf en anderen beter wilt begrijpen of weerbaarder wilt worden in deze hectische tijden. Essentieel, krachtig, realistisch: De 7 eigenschappen is een boek waar je je leven lang profijt van hebt. Stephen Covey (1932-2012) is de grootmeester van de persoonlijke ontwikkeling. Hij was een veelgevraagd en gedreven coach, schrijver en spreker. De 7 eigenschappen werd in 38 talen vertaald en er zijn wereldwijd meer dan 25 miljoen exemplaren verkocht.

Valuation of Environment-Related Health Risks for Children Sep 07 2021 This report, the final output of the Valuation of Environment-Related Health Impacts (VERHI) project, presents new findings on whether the value of reducing environmental risk greater for children than for adults.

Redirecting Innovation in U.S. Health Care Jul 25 2020 New medical technologies are a leading driver of U.S. health care spending. This report identifies promising policy options to change which medical technologies are created, with two related policy goals: (1) Reduce total health care spending with the smallest possible loss of health benefits, and (2) ensure that new medical products that increase spending are accompanied by health benefits that are worth the spending increases.

Methods for the Economic Evaluation of Health Care Programmes Jun 16 2022 The purpose of economic evaluation is to inform decisions intended to improve healthcare. The new edition of Methods for the Economic Evaluation of Health Care Programmes equips the reader with the necessary tools and understanding required to undertake evaluations by providing an outline of key principles and a 'tool kit' based on the authors' own experiences of undertaking economic evaluations. Building on the strength of the previous edition, the accessible writing style ensures the text is key reading for the non-expert reader, as no prior knowledge of economics is required. The book employs a critical appraisal framework, which is useful both to researchers conducting studies and to decision-makers assessing them. Practical examples are provided throughout to aid learning and understanding. The book discusses the analytical and policy challenges that face health systems in seeking to allocate resources efficiently and fairly. New chapters include 'Principles of economic evaluation' and 'Making decisions in healthcare' which introduces the reader to core issues and questions about resource allocation, and provides an understanding of the fundamental principles which guide decision making. A key part of evidence-based decision making is the analysis of all the relevant evidence to make informed decisions and policy. The new chapter 'Identifying, synthesising and analysing evidence' highlights the importance of systematic review, and how and why these methods are used. As methods of analysis continue to develop, the chapter on 'Characterising, reporting and interpreting uncertainty' introduces the reader to recent methods of analysis and why characterizing uncertainty matters for health care decisions. The fourth edition of

Methods for the Economic Evaluation of Health Care Programmes has been thoroughly revised and updated, making it essential reading for anyone commissioning, undertaking, or using economic evaluations in health care, including health service professionals, health economists, and health care decision makers.

Placing a Value on the Health Benefit for Active-duty Personnel Feb 18 2020 The availability of health care for active-duty military personnel and their families is a fundamental component of the services' commitment to support their personnel. However, military health care benefits are not routinely counted as an element of military compensation in reports given to individual members, nor in comparisons of military versus civilian compensation. This may be because military health care benefits are provided in such a way that it is difficult to account for the value accruing to individuals. For many military families, health care is received in-kind, that is, the family pays no health insurance premium and pays nothing for the care and prescriptions received at military treatment facilities. However, unlike some other benefits that are received in-kind, such as housing, there is no corresponding allowance for members who "opt out" of the system; indeed, individual military members are not allowed to opt out of the military health care system. In addition, members are selected to enter the military based on their health, and, as it is for other young adults, the demand for health care is considerably less than it is for the elderly. Thus, younger members may not fully appreciate the value of their health care coverage. Despite these factors, the authors argue that the military health care system represents a substantial benefit to military members and families, largely freeing them from concern about receiving health care when the need arises. The purpose of this research is to consider how a reasonable monetary value might be attached to the military health care benefit from the perspective of the active-duty service member and his or her family. Including the value of the health care benefit as an element of military compensation would make military/civilian pay and benefit comparisons more comprehensive and accurate, and bring greater visibility to the value of the health care benefits to members.

The Value of Life Near Its End and Terminal Care Oct 28 2020 Medical care at the end of life, which is often estimated to contribute up to a quarter of US health care spending, often encounters skepticism from payers and policy makers who question its high cost and often minimal health benefits. It seems generally agreed upon that medical resources are being wasted on excessive care for end-of-life treatments that often only prolong minimally an already frail life. However, though many observers have claimed that such spending is often irrational and wasteful, little explicit and systematic analysis exists on the incentives that determine end of life health care spending. There exists no positive theory that attempts to explain the high degree of end-of life spending and why differences across individuals, populations, or time occur in such spending. This paper attempts to provide the first rational and systematic analysis of the incentives behind end of life care. The main argument we make is that existing estimates of the value of a life year do not apply to the valuation of life at the end of life. We stress the low opportunity cost of medical spending near ones death, the

importance of keeping hope alive in a terminal care setting, the larger social value of a life than estimated in private demand settings, as well as the insignificance in quality of life in lowering its value. We derive how an ex-ante perspective in terms of insurance and R & D alters some of these conclusions.

Member Health-Value from Wearables the Ultimate Step-By-Step Guide Mar 21 2020  
How do we Identify specific Member Health-Value From Wearables investment and emerging trends? Can Member Health-Value From Wearables be learned? What are the expected benefits of Member Health-Value From Wearables to the business? Member Health-Value From Wearables Service Sales Supply Chain, Procurement, Distribution Measure, Monitor and Predict Member Health-Value From Wearables Activities to Optimize Operations and Profitably, and Enhance Outcomes This easy Member Health-Value From Wearables self-assessment will make you the established Member Health-Value From Wearables domain standout by revealing just what you need to know to be fluent and ready for any Member Health-Value From Wearables challenge. How do I reduce the effort in the Member Health-Value From Wearables work to be done to get problems solved? How can I ensure that plans of action include every Member Health-Value From Wearables task and that every Member Health-Value From Wearables outcome is in place? How will I save time investigating strategic and tactical options and ensuring Member Health-Value From Wearables costs are low? How can I deliver tailored Member Health-Value From Wearables advice instantly with structured going-forward plans? There's no better guide through these mind-expanding questions than acclaimed best-selling author Gerard Blokdyk. Blokdyk ensures all Member Health-Value From Wearables essentials are covered, from every angle: the Member Health-Value From Wearables self-assessment shows succinctly and clearly that what needs to be clarified to organize the required activities and processes so that Member Health-Value From Wearables outcomes are achieved. Contains extensive criteria grounded in past and current successful projects and activities by experienced Member Health-Value From Wearables practitioners. Their mastery, combined with the easy elegance of the self-assessment, provides its superior value to you in knowing how to ensure the outcome of any efforts in Member Health-Value From Wearables are maximized with professional results. Your purchase includes access details to the Member Health-Value From Wearables self-assessment dashboard download which gives you your dynamically prioritized projects-ready tool and shows you exactly what to do next. Your exclusive instant access details can be found in your book. You will receive the following contents with New and Updated specific criteria: - The latest quick edition of the book in PDF - The latest complete edition of the book in PDF, which criteria correspond to the criteria in... - The Self-Assessment Excel Dashboard, and... - Example pre-filled Self-Assessment Excel Dashboard to get familiar with results generation ...plus an extra, special, resource that helps you with project managing. **INCLUDES LIFETIME SELF ASSESSMENT UPDATES** Every self assessment comes with Lifetime Updates and Lifetime Free Updated Books. Lifetime Updates is an industry-first feature which allows you to receive

verified self assessment updates, ensuring you always have the most accurate information at your fingertips.
