Für die vorliegende 9. Auflage wurde der Inhalt vollständig neu strukturiert und in kürzere und in sich abgeschlossene Kapitel aufgeteilt. Einleitend beschreibt das Werk die Funktionsweise von Verbrennungsmotoren für Fahrzeuge und stationäre Anwendungen sowie diejenige für alternative Antriebssysteme. Daran anschließend spannen die Autoren einen Bogen von einfachen thermodynamischen Grundlagen des Verbrennungsmotors hin zu komplexen Modellansätzen zur Beschreibung der Gemischbildung, Zündung, Verbrennung und Schadstoffbildung unter Beachtung der Motorperipherie von Otto- und Dieselmotoren. Damit liegt der inhaltliche Schwerpunkt dieses Bandes auf den Simulationsmodellen und deren strömungstechnischen, thermodynamischen und verbrennungschemischen Grundlagen sowie der Messtechnik zur Verifikation dieser Modelle, wie sie für die Entwicklung moderner Verbrennungsmotoren unentbehrlich sind. Für die aktuelle Auflage wurde vor allem das Thema alternative Antriebssysteme durch die Behandlung von Brennstoffzellen und elektrischen Antriebssystemen stark erweitert. Alle Kapitel wurden vollständig überarbeitet und aktualisiert. Building around innovative services related to different modes of transport and traffic management, intelligent transport systems (ITS) are being widely adopted worldwide to improve the efficiency and safety of the transportation system. They enable users to be better informed and make safer, more coordinated, and smarter decisions on the use of transport networks. Current ITSs are complex systems, made up of several components/sub-systems characterized by time-dependent interactions among themselves. Some examples of these transportation-related complex systems include: road traffic sensors, autonomous/automated cars, smart cities, smart sensors, virtual sensors, traffic control systems, smart roads, logistics systems, smart mobility systems, and many others that are emerging from niche areas. The efficient operation of these complex systems requires: i) efficient solutions to the issues of sensors/actuators used to capture and control the physical parameters of these systems, as well as the quality of data collected from these systems; ii) tackling complexities using simulations and analytical modelling techniques; and iii) applying optimization techniques to improve the performance of these systems. This book highlights recent findings in industrial, manufacturing and mechanical engineering, and provides an overview of the state of the art in these fields, mainly in Russia and Eastern Europe. A broad range of topics and issues in modern engineering is discussed, including the dynamics of machines and working processes, friction, wear and lubrication in machines, surface transport and technological machines, manufacturing engineering of industrial facilities, materials engineering, metallurgy, control systems and their industrial applications, industrial mechatronics, automation and robotics. The book gathers selected papers presented at the 7th International Conference on Industrial Engineering (ICIE), held in Sochi, Russia, in May 2021. The authors are experts in various fields of engineering, and all papers have been carefully reviewed. Given its scope, the book will be of interest to a wide readership, including mechanical and production engineers, lecturers in engineering disciplines, and engineering graduates. Prof. Dr.-Ing. Roland Baar, Head of the department of Powertrain Technologies at Technische Universität Berlin, unfortunately deceased on 23 June 2018. Professor Roland Baar rendered an outstanding service to the science of powertrain technologies, especially in the field of turbocharging. His enthusiasm and determination were both a professional and a personal inspiration to everyone who worked with him. To continue Roland Baar's work, his business and academic colleagues dedicate this collection of scientific papers to his memory. The articles in this memorial publication cover different aspects of powertrain technology research. This topic plays an important part in the current public debate on climate protection, air pollution control and sustainability. The first articles of this book deal with the market situation and the general framework for research and development of powertrains. This lays the foundation for more technical topics. The following articles are concerned with the growing trend of powertrain electrification. They discuss the numeric modeling of alternative drivetrains and the energetic assessment of different powertrain concepts, such as hybrid drives and fuel cells. One of the central topics in this book is the combustion engine, which encompasses both the diesel and the gasoline engine. For instance, the injection of water into gasoline engines is covered extensively as a method to raise the thermodynamic efficiency. Furthermore, there are articles on innovative injection concepts for diesel engines as well as on the use of alternative, regenerative fuels for combustion engines. Many of the articles address the subject of turbocharging of combustion engines, which was a major research topic of Roland Baar. In the present book, a special focus is on the analysis of energy flows and the possibilities of a better modeling of charging units in numerical simulations. The last part of the book contains articles on novel aftertreatments of exhaust gases to reduce pollutant emissions as well as on experimental methods in this field. Am 23. Juni 2018 verstarb Prof. Dr.-Ing. Roland Baar, Leiter des Fachgebiets Fahrzeugantriebe der Technischen Universität Berlin. Roland Baar hat sich insbesondere auf dem Gebiet der Aufladung von Verbrennungsmotoren verdient gemacht und brachte darüber hinaus die Forschung rund um den Fahrzeugantrieb voran. Mit seiner Energie und seiner Entschlossenheit war er für alle, die mit ihm arbeiteten, sowohl fachlich als auch persönlich stets eine Inspiration. Um seine Arbeit fortzuführen, haben seine beruflichen und akademischen Weggefährtinnen und -gefährten ihm sowie seinen Forschungsthemen deshalb diesen Band gewidmet. In dieser Gedenkschrift sind Beiträge versammelt, die sich dem Forschungsfeld Fahrzeugantriebe widmen. Dieses Themengebiet steht auf Grund der aktuellen Fragestellungen hinsichtlich Klimaschonung, Luftreinhaltung und Nachhaltigkeit im Fokus der gesellschaftlichen Debatte. Darstellungen der Marktsituation und der sich daraus ableitenden Randbedingungen für die Erforschung und Entwicklung künftiger Fahrzeugantriebe bilden die Grundlage für die folgenden technischen Themen. Der zunehmende Trend der Elektrifizierung des Antriebsstrangs wird in verschiedenen Beiträgen behandelt. Hier werden die numerische Modellierung alternativer Antriebe sowie die energetische Bewertung verschiedener Antriebskonzepte wie etwa elektro-hybride Antriebe sowie Brennstoffzellenanwendungen diskutiert. Ein Schwerpunkt des Buches ist die diesel- und die ottomotorische Verbrennung. So wird beispielsweise die Wassereinspritzung für Ottomotoren zur Steigerung des thermodynamischen Wirkungsgrades ausführlich behandelt. Ebenso finden innovative Einspritzkonzepte für Dieselmotoren sowie der Einsatz alternativer, regenerativer Kraftstoffe für Verbrennungsmotoren Beachtung. Ein wesentlicher Anteil der Beiträge ist der Aufladung von Verbrennungsmotoren gewidmet – ein Kernthema der Arbeit von Roland Baar. Insbesondere das Verständnis der Energieströme sowie eine Möglichkeit einer verbesserten Modellierung des Aufladeaggregats für die numerische Simulation werden beleuchtet. Weitere Beiträge decken zusätzlich den Bereich neuartiger Abgasnachbehandlungssysteme zur Reduzierung der Schadstoffemissionen sowie experimentelle Methoden zur deren Untersuchung ab. Verbrennungsmotoren weiterzuentwickeln, sie effizienter und emissionsärmer zu machen, bleibt ein Schlüsselfaktor. Denn die hohe Energiedichte flüssiger Kraftstoffe wird wesentlich dazu beitragen, die heute gewohnte Langstreckentauglichkeit von Pkw und insbesondere von

Nutzfahrzeugen auch morgen noch sicherzustellen. Racing continues to provide the preeminent directive for advancing powertrain development for automakers worldwide. Formula 1, World Rally, and World Endurance Championship all provide engineering teams the most demanding and rigorous testing opportunities for the latest engine and technology designs. Turbocharging has seen significant growth in the passenger car market after years of development on racing circuits. Advances in Turbocharged Racing Engines combines ten essential SAE technical papers with introductory content from the editor on turbocharged engine use in F1, WRC, and WEC-recognizing how forced induction in racing has impacted production vehicle powertrains. Topics featured in this book include: Fundamental aspects of design and operation of turbocharged engines Electric turbocharger usage in F1 Turbocharged engine research by Toyota, SwRI and US EPA, Honda, and Caterpillar This book provides a historical and relevant insight into research and development of racing engines. The goal is to provide the latest advancements in turbocharged engines through examples and case studies that will appeal to engineers, executives, instructors, students, and enthusiasts alike. With the changing landscape of the transport sector, there are also alternative powertrain systems on offer that can run independently of or in conjunction with the internal combustion (IC) engine. This shift has actually helped the industry gain traction with the IC Engine market projected to grow at 4.67% CAGR during the forecast period 2019-2025. It continues to meet both requirements and challenges through continual technology advancement and innovation from the latest research. With this in mind, the contributions in Internal Combustion Engines and Powertrain Systems for Future Transport 2019 not only cover the particular issues for the IC engine market but also reflect the impact of alternative powertrains on the propulsion industry. The main topics include: • Engines for hybrid powertrains and electrification • IC engines • Fuel cells • E-machines • Air-path and other technologies achieving performance and fuel economy benefits • Advances and improvements in combustion and ignition systems • Emissions regulation and their control by engine and after-treatment • Developments in real-world driving cycles • Advanced boosting systems • Connected powertrains (AI) • Electrification opportunities • Energy conversion and recovery systems • Modified or novel engine cycles • IC engines for heavy duty and off highway Internal Combustion Engines and Powertrain Systems for Future Transport 2019 provides a forum for IC engine, fuels and powertrain experts, and looks closely at developments in powertrain technology required to meet the demands of the low carbon economy and global competition in all sectors of the transportation, off-highway and stationary power industries. This Proceedings volume gathers outstanding papers submitted to Proceedings of China SAE Congress 2018: Selected Papers, the majority of which are from China – the largest car-maker as well as most dynamic car market in the world. The book covers a wide range of automotive topics, presenting the latest technical advances and approaches to help technicians solve the practical problems that most affect their daily work. It is intended for researchers, engineers and postgraduate students in the fields of automotive engineering and related areas. Die inhaltlichen Schwerpunkte des Tagungsbands zur ATZlive-Veranstaltung Ladungswechsel und Emissionierung 2018 sind unter anderem das Spannungsfeld von Luftqualität, Klimaschutz und Elektrifizierung. Die Tagung ist eine unverzichtbare Plattform für den Wissens- und Gedankenaustausch von Forschern und Entwicklern aller Unternehmen und Institutionen. This resource covers all areas of interest for the practicing engineer as well as for the student at various levels and educational institutions. It features the work of authors from all over the world who have contributed their expertise and support the globally working engineer in finding a solution for today‘s mechanical engineering problems. Each subject is discussed in detail and supported by numerous figures and tables. Das Buch behandelt die neuesten Entwicklungen in Bezug auf Ottomotoren mit Direkteinspritzung und Direkteinblasung von Kraftstoffen und Gasen, beschreibt und bewertet Motorkonzepte, wie z.B. Downsizing und Aufladung und erläutert die Anforderungen an Werkstoffe und Betriebsstoffe. Der Ausblick am Ende des Buches beleuchtet die Frage, ob Ottomotoren in Zukunft das Kraftstoff-Verbrauchsniveau von Dieselmotoren erreichen können und ob alternative Antriebe Hubkolbenmotoren verdrängen werden. Für die 4. Auflage wurden Kapitel überarbeitet und aktualisiert. Außerdem wurde ein Kapitel zur Direkteinblasung von Erdgas/Methan und Wasserstoff ergänzt. Der Ottomotor mit Direkteinspritzung und Direkteinblasung hat zunehmende Bedeutung erlangt. Dessen Potenzial ist jedoch bei weitem noch nicht ausgeschöpft. Leistungs- und Drehmomenterhöhung gepaart mit weiter reduziertem Kraftstoffverbrauch bei gleichzeitiger Schadstoffreduzierung geben klar die Richtung künftiger Entwicklungen vor. Als Schlüssel für diese Entwicklung können neue Einspritz/Einblas- und Verbrennungsverfahren gelten, die einen Technologieschub bewirken. Carmakers release new models every year with advanced technology to attract consumer interest and to satisfy increasingly stringent government regulations. Some of these technologies are firsts or leading-edge, and they start trends that more companies will soon follow. Snapshots of the direction of the automotive industry, along with OEM and supplier perspectives, are presented in these articles that have been collected by the Editors of Automotive Engineering whose aim is to provide the reader with a complete overview of the key advances that took place over the course of one model year. • Provides a single source for information on the key engineering trends of one year. • Allows the reader to skip to chapters that cover specific car models that interest them, or read about all models from beginning to end. • Includes plenty of big, full-color images and the facts about the most recent technology and engineering innovations. Each car manufacturer has its own chapter exploring new models in-depth. The yearly trends and innovations that make the automotive industry fascinating to both the engineer and the customer are all captured in the imagery and easy-reading of this full-color book. 14th International Conference on Turbochargers and Turbocharging addresses current and novel turbocharging system choices and components with a renewed emphasis to address the challenges posed by emission regulations and market trends. The contributions focus on the development of air management solutions and waste heat recovery ideas to support thermal propulsion systems leading to high thermal efficiency and low exhaust emissions. These can be in the form of internal combustion engines or other propulsion technologies (eg. Fuel cell) in both direct drive and hybridised configuration. 14th International Conference on Turbochargers and Turbocharging also provides a particular focus on turbochargers, superchargers, waste heat recovery turbines and related air managements components in both electrical and mechanical forms. Die Anforderungen an Forschung und Entwicklung in der Automobilindustrie ändern sich kontinuierlich. Hersteller und Zulieferer müssen einerseits globale Lösungen entwickeln, andererseits aber Kundenbedürfnisse und legislative Vorgaben einzelner Märkte berücksichtigen. Selbst bei der Emissionsgesetzgebung herrscht alles andere als globale Einigkeit. In Europa wird ab September 2017 die Messung der "real-driving emissions" (RDE) eingeführt. Damit wird die Bewertung der Schadstoffemissionen vom Prüfstand auf die Straße verlagert, mit umfassenden Konsequenzen für die Antriebsentwicklung. Zudem wird in verschiedenen Weltregionen die lokale Einführung von Zonen mit schadstoffemissionsfreiem Verkehr gefordert. Überlagert wird all dies durch die laufende Absenkung der CO2-Grenzwerte für die Fahrzeugflotten. Alle Weltregionen haben hier unterschiedliche Absenkungsschritte definiert. Dies alles wird noch getoppt von steigenden Ansprüchen an Komfort und Emotionalität des Automobils. Wie reagiert nun die Automobilindustrie im Spannungsfeld zwischen zunehmender Globalisierung und möglichst global zu vermarktender Produkte auf der einen Seite und den neuen, von Regionen abhängigen Anforderungen an das Fahrzeug und der dazugehörigen Variantenvielfalt auf der anderen Seite? Welche technischen Konsequenzen ergeben sich hieraus? Darüber und über vieles mehr werden Experten aus Industrie und Wissenschaft beim Symposium berichten. Internal combustion engines are among the most fascinating and ingenious machines which, with their invention and continuous development, have positively influenced the industrial and social history during the last century, especially by virtue of the role played as propulsion technology par excellence used in on-road private and commercial transportation. Nowadays, the growing attention towards the de-carbonization opens up new scenarios, but IC engines will continue to have a primary role in multiple sectors: automotive, marine, offroad machinery, mining, oil & gas and rail, power generation, possibly with an increasing use of non-fossil fuels. The book is organized in monothematic chapters, starting with a presentation of the general and functional characteristics of IC engines, and then dwelling on the details of the fluid exchange processes and the definition of the layout of intake and exhaust systems, obviously including the supercharging mechanisms, and continue with the description of the injection and combustion processes, to conclude with the explanation of the formation, control and reduction of pollutant emissions and radiated noise. Dimitri Seboldt zeigt die Auswirkungen verschiedener, die Gemischbildung und Verbrennung betreffender Parameter auf die Emissionen unverbrannter Kohlenwasserstoffe in Ottomotoren mit CNG-Direkteinblasung. Seine experimentellen und numerischen Untersuchungen stellen deutliche Unterschiede in der Gemischbildung zwischen gasförmigen und flüssigen Kraftstoffen heraus, die bei der Auslegung eines Brennverfahrens für Gasmotoren Berücksichtigung finden müssen. Durch das Herausarbeiten und Verstehen der hier dargestellten Phänomene mit einem gasförmigen Kraftstoff kann der Autor das Potenzial der CNG-Direkteinblasung zur HC-Reduktion aufzeigen und Anforderungen an ein HC-optimiertes Brennverfahren formulieren.
????8??? This book is about the cooperation of AIAA and IEEE, two major engineering organizations from two distinct focus points of technologies: intelligent aero-engine and electrified aviation. AIAA and IEEE both have their intrinsic needs for each other and their co-working is a must-have in the rest of 21st century. AIAA needs IEEE to become smarter and greener and IEEE needs a much broader scope to enlarge its marketplace and playground. The topics related to AIAA's and IEEE's co-project are highly multi- and inter-disciplinary related and highly goal-oriented. The target audience of this book is IEEE, AIAA members and other related professionals from universities, industries and institutes in the fields of AI-driven smart systems and electric airplanes with the associated new electric aero-engines and mobile aviation electric powers. The key contents When AIAA is Meeting IEEE AIAA vs. IEEE How to interact and what to achieve The mindset analysis of AIAA and IEEE

The smarter AIAA The AI - Smart brain, IoT, e-devices The smart sensors for AIAA -scenarios, fabrication, challenges, and testings Electric aviation Versatile, smarter, and green The evolution of aero-engines - pistol, gas turbine, electric aero-engine The integration of aero-engines and aero-craft Delta VTOLer and STOL for B787 Rotatable wing and VTOL operation The RDF jet – a new electric aero-engine The features: small, light, thrust The architecture: motor, fan, jet The principle: rim driven, Tai Chi fan, duct, and jet Aviation electric power grid Energy and weight Battery, LTG, and 3D HK SC Proceedings of the FISITA 2012 World Automotive Congress are selected from nearly 2,000 papers submitted to the 34th FISITA World Automotive Congress, which is held by Society of Automotive Engineers of China (SAE-China) and the International Federation of Automotive Engineering Societies (FISITA). This proceedings focus on solutions for sustainable mobility in all areas of passenger car, truck and bus transportation. Volume 7: Vehicle Design and Testing (I) focuses on: •Vehicle Performance Development •Vehicle Integration Platformized and Universal Design •Development of CAD /CAE/CAM and CF Methods in Automotive Practice •Advanced Chassis, Body Structure and Design •Automotive Ergonomic, Interior and Exterior Trim Design •Vehicle Style and Aerodynamic Design •New Materials and Structures Above all researchers, professional engineers and graduates in fields of automotive engineering, mechanical engineering and electronic engineering will benefit from this book. SAE-China is a national academic organization composed of enterprises and professionals who focus on research, design and education in the fields of automotive and related industries. FISITA is the umbrella organization for the national automotive societies in 37 countries around the world. It was founded in Paris in 1948 with the purpose of bringing engineers from around the world together in a spirit of cooperation to share ideas and advance the technological development of the automobile. This Proceedings volume gathers outstanding papers submitted to the 19th Asia Pacific Automotive Engineering Conference & 2017 SAE-China Congress, the majority of which are from China – the largest car-maker as well as most dynamic car market in the world. The book covers a wide range of automotive topics, presenting the latest technical advances and approaches to help technicians solve the practical problems that most affect their daily work. The Big Book of Tiny Cars presents entertaining profiles of automotive history’s most famous—and infamous—microcars and subcompacts from 1901 to today. Illustrated with photos and period ads. In addition to increasing electrifi cation, forecasts show a worldwide increase in the number of gasoline engines being produced. Rising industrialization will likely lead to 120 million new registrations, at least 75% of them for vehicles based on combustion engines, by the year 2030. Ambitious climate targets will remain a chimera as long as the gasoline engine is not adapted to help significantly reduce carbon emissions. In addition to the requirements of the established markets, we must be prepared for new challenges in emerging economic regions in particular. Engines require greater optimization while remaining sufficiently robust to meet the demands of use all around the world. In addition to the Miller combustion cycle, the industry needs engines that employ strongly chargediluted combustion to achieve efficiencies significantly above 40%. Instrumental in this will be ignition processes with great potential to shift ignition limits. The Zero Carbon Car examines the hundreds of ways in which car manufacturers are trying to reduce our carbon footprint, and the adaptation of the automotive industry to changing technology in a world where environmental issues are becoming ever more prevalent. The book's in-depth research into green car technology shows that manufacturers make concerted efforts, but sometimes also defeat the gains of their innovation.Topics covered include: What is meant by the terms 'global warming' and 'green', and how these can be defined; An account of the long history of green automotive technology; Alternative fuels, including diesel and hydrogen; Developments in environmentally friendly engine technology; Electric cars; Environmental issues in material usage and car body manufacture. A wide-ranging survey of the hundreds of ways in which car manufacturers are trying to reduce our carbon footprint.Written in an easy-to-understand manner, the book enables the reader to fully understand what is meant by 'global warming'.Examines alternative fuels, material usage and the motive power options available to us.Superbly illustrated with 350 colour photographs.Brian Long is a professional writer and motoring historian with over sixty books to his credit.
